

Assignment –2

Introducing Relational Databases.

Roll No: 87243

1) Which field of the Customers table is the primary key?

Answer: The Cnum field is the primary key in the customer table as it establishes a connection between the Customer table and the Orders table.

2) What is the 4th column of the Customers table?

Answer: The fourth column in the Customers table is Ratings and is used to receive customer ratings.

3) What is another word for row? For column?

Answer: In a table, the row is also called as record while the column is also called as field.

4) Why isn't it possible to see the first five rows of a table?

Answer: Generally, there is no such thing as first five rows or last five rows. SQL tables represent unordered sets. The SQL language states that any RDBMS is free to return data in any order that is convenient unless the query contains an ORDER BY clause which then defines the order of the return rows.
